Constructing a Digital Environment

Trail: Going Underground

12:00 25th Aug 2021 – 12:00 28th Aug 2021 *then*

12:00 5th Sept 2021 – 12:00 8th Sept 2021

Registration and further details: [Link](#)

To improve the accessibility of data collected through NERC-funded research, or managed by NERC data centres, we are collecting feedback on the user experience (UX) to improve the navigation of our various web portals to assess these data.

To gather feedback we are inviting you to take part in our **Environmental Data Discovery Trails**. The events will run as two successive short online quizzes, which will ask you to navigate a website and find the information linked to each trail. If you complete all of the feedback boxes you'll be entered into a prize draw for a reward.

In this Digital Trail event 'Going Underground' we will be following a trail through the British Geological Survey's (BGS) Onshore GeoIndex website. There will be daily draws made for 10 NERC water bottles and a single prize draw for a fantastic Lego London Geological Cross-section kit made after each event. Post-event the trail link will remain available as an educational resource only.

The **NERC Constructing a Digital Environment (CDE) programme** is a Strategic Priorities Fund programme aiming to develop a digitally enabled environment, benefiting scientists, policymakers, businesses, communities and individuals. Our funded research will help support the creation of integrated networks of sensors (in situ and remote sensing based), and the methodologies and tools for assessing, analysing, monitoring and forecasting the state of the natural environment.
