Digital Trails

Constructing a Digital Environment

Trail: From present to past meteorology around the globe

12:00 11th Apr 2021 – 12:00 14th Apr 2021 *then*

12:00 21st Apr 2021 – 12:00 24th Apr 2021

Registration and further details: [Link](#)

To improve the accessibility of data collected through NERC-funded research, or managed by NERC data centres, we are collecting feedback on the user experience (UX) to improve the navigation of our various web portals to assess these data.

To gather feedback we are inviting you to take part in our **Environmental Data Discovery Trails**. The events will run as two successive short online quizzes, which will ask you to navigate a website and find the information linked to each trail. If you complete all of the feedback boxes you'll be entered into a prize draw for a reward.

In this Digital Trail event 'From present to past meteorology around the globe' we will be following a trail through the Met Office's Weather Observations Website (WOW), and NERC's repository for Atmospheric Science and Earth Observation (the Centre for Environmental Data Analysis, CEDA) websites. There will be daily draws made for 10 NERC water bottles and a single prize draw for £100 made after each event. Post-event the trail link will remain available as an educational resource.

The **NERC Constructing a Digital Environment (CDE) programme** is a Strategic Priorities Fund programme aiming to develop a digitally enabled environment, benefiting scientists, policymakers, businesses, communities and individuals. Our funded research will help support the creation of integrated networks of sensors (in situ and remote sensing based), and the methodologies and tools for assessing, analysing, monitoring and forecasting the state of the natural environment.
